

3499. Maximize Active Section with Trade I

Solved ●

Medium Topics Hint

You are given a binary string `s` of length `n`, where:

- '1' represents an **active** section.
- '0' represents an **inactive** section.

You can perform **at most one trade** to maximize the number of active sections in `s`. In a trade, you:

- Convert a contiguous block of '1's that is surrounded by '0's to all '0's.
- Afterward, convert a contiguous block of '0's that is surrounded by '1's to all '1's.

Return the **maximum** number of active sections in `s` after making the optimal trade.

Note: Treat `s` as if it is **augmented** with a '1' at both ends, forming `t = '1' + s + '1'`. The augmented '1's **do not** contribute to the final count.

Example 1:

Input: `s = "01"`

Output: 1

Explanation:

Because there is no block of '1's surrounded by '0's, no valid trade is possible. The maximum number of active sections is 1.

Example 2:

Input: `s = "0100"`

Output: 4

Explanation:

- String `"0100"` → Augmented to `"101001"`.
- Choose `"0100"`, convert `"101001"` → `"100001"` → `"11111"`.
- The final string without augmentation is `"1111"`. The maximum number of active sections is 4.

Example 3:

Input: `s = "1000100"`

Output: 7

Explanation:

- String `"1000100"` → Augmented to `"110001001"`.
- Choose `"000100"`, convert `"110001001"` → `"110000001"` → `"11111111"`.
- The final string without augmentation is `"1111111"`. The maximum number of active sections is 7.

Example 4:

Input: `s = "01010"`

Output: 4

Explanation:

- String `"01010"` → Augmented to `"1010101"`.
- Choose `"010"`, convert `"1010101"` → `"1000101"` → `"1111101"`.
- The final string without augmentation is `"11110"`. The maximum number of active sections is 4.

Constraints:

- $1 \leq n == s.length \leq 10^5$
- `s[i]` is either '0' or '1'
